On the afternoon of Tuesday July 22nd, Crater Lake National Park received numerous lightning strikes. On Monday July 28th at approximately 11:15am a fire was discovered in the Pumice Flat area in the south end of the park. It was believed to have been ignited by lightning the previous week. The fire is burning in mixed conifer forests composed of hemlock, fir, and pine. Aggressive suppression action is being taken at this time. No expected containment date has been set. All park facilities and operations remain open. Hikers on the Pacific Crest National Scenic Trail may be impacted in the upcoming week and may experience delays.

Duty Officer Greg Funderburk
