Course 103. Basic Saw Crew Training

STUDENT SKILL OUTCOMES:
• “Trail Eyes” to see the PCT trail corridor and clearing limits
• Safe use of crosscut saws and axes, including commitment to PPE
• Effective sawing and chopping skills that maximize efficiency
• A commitment to saw and axe Safety Awareness, specifically situational awareness

KEY TERMS:
- **Blow Down**: (aka wind fall) any trees fallen across a trail, though usually the result of high winds, most commonly in the winter storm season.
- **Clearing Limits**: (aka clearing specifications, trail specs) exactly how wide and how high to cut tree limbs, shrubs, blow down and tree saplings to open the trail corridor for users. For the PCT, from the ground to 24” high, cut an opening 3’ wide. From 24” to 10’ cut an opening 8’ wide. This large corridor allows from some vegetation regrowth before packstock are obstructed. Other kinds of trails have different specifications.
- **Kerf**: the opening in a log cut by a saw. A wedge is often placed behind the saw to prevent the kerf from closing and pinching the blade.
- **Log Out**: trail work removing blow down; usually in the spring to open the trail for high use season. In Wilderness areas the work is done with hand tools such as crosscut saws; while elsewhere it is usually done with chain saws.
- **Situational Awareness**: a subset of Safety Awareness that refers to safety concerns specific to crosscut and chain saws. http://www.fhwa.dot.gov/environment/fspubs/04232822/page16.htm#sit
- **Trail Corridor**: (aka travel corridor or trail prism) best thought of as a tunnel through the woods, it includes all the elements of a trail affected by construction and maintenance workers including the excavated back-slope and tread, and the entire area within the clearing limits.

KEY CONCEPTS:
1) Safety Documents and Concerns:
   • Personal Protective Equipment (PPE), Job Hazard Analysis (JHA)/ Tailgate Safety Session (TSS), Emergency Action Plan (EAP)
2) Trail Crew Leave No Trace: Have a positive impact on the land through trail work and be sensitive to off trail and camping impacts.
3) Proper/ Improper Tool Care and Use:
   • Hand saw, Pulaski, axe, sledge hammer, wedge, crosscut saw
4) Develop “Trail Eyes”:
   • Visualize trail corridor large enough for delivery truck to pass through
   • Standard clearing limits:
     – 3’ wide up to knee height, 8’ wide up to 10’ height
     – Typical alterations for wet/ dry conditions
5) Crosscut Saw Information:
- Situational Awareness
- Recognize and safely remove spring poles, assess overhead hazards, escape routes
- Tension, Compression, and Side Binds
  - Sawing process:
    - Designate a lead sawyer and assign duties
    - Decide location of cut and remove limbs/ bark from cutting area
    - Smooth pulling strokes with good communication between sawyers
- Techniques to avoid pinching
  > Compound cuts, cross or top wedge, underbucking, lever poles
- Remove any logs obstructing flow of outfall ditches
6) Report work promptly

*These are general trail-wide clearing guidelines. Please work with your local land manager to determine if different guidelines are used in your local area.
